-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file. ***Drawings***

1. The content of the drawings are approved by the examiner.

Title

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1, 5-7, and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsuoka et al (5,508,784). The method for accommodating different drum loads in an imaging device, the method by Matsuoka et al. comprises steps of: a) applying a drive stimulus to the drum load; b) monitoring the response of the drum load to the stimulus; c) determining a new

Art Unit: 2852

value for at least one control parameter for driving the drum load; and d) updating the control parameter in accordance with the new value (figure 3). The steps (b) to (d) are performed under closed loop feedback control (figure 3). The steps (a) to (d) are performed under open loop feedback control (figure 3). The steps (b) to (d) are iteratively repeated (figure 3).

Matsuoka et al. teaches a system for driving a drum load, comprising: a drum drive for driving the load; an encoder for sensing the resulting rotation of the drum; and a controller operably connected to the drum drive to provide control signals thereto, the control signals derived by the controller in response to rotational information received from the encoder, the controller having a drive parameter estimator for determining suitable drive conditions for the load (column 7, lines 39-44). The drive parameter estimator comprises instructions stored in computer readable memory (column 7, line 57 – column 8, line 5). The drive parameter estimator comprises an adaptive controller (figure 3).

Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ueno et al., Koide, and Ito teach pertinent prior art.

Allowable Subject Matter

6. Claims 2-4, 8-11, and 15-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
